(54) PHOTOVOLTAIC DEVICE AND SOLAR BATTERY MODULE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a low-priced photovoltaic device, having very small power loss due to current collection and simply performing in process.

SOLUTION: This photovoltatic device is provided with an insulating resin film 2, backside electrodes 3, 4 and 5, an amorphous silicon layer 6 and a transparent electrode 7 formed on a conductive substrate 1. At least a recessed part or a through hole 8 is formed on the above-mentioned photovoltaic device, at least the backside electrodes 3, 4 and 5 are covered by the amorphous silicon layer 6 on the above-mentioned recessed part or the through hole 8. The amorphous silicon layer 6 is covered on the

through hole 8, and the transparent electrode 6 is connected to the conductive substrate 1 through the recessed part or the through hole 8.
